Python 101 Lec02

Ifs and Loops

thoum

August 5, 2019

Possible Projects

- 1. Beating sugang.snu.ac.kr's CAPTCHA
 - Digit recognition with kNN
- 2. Music Recognition with kNN
- 3. JoonggoNara Notifier

lf

```
if some_boolean:
    pass #do something
```

If examples

```
score = int(input())
if 90 <= score and score <= 100:
    print('A')
elif 80 <= score <= 89:
    print('B')
elif 70 <= score <= 79:
elif 60 <= score <= 69:
    print('D')
    print('F')
```

*why?

More examples

```
pengram = "The quick brown fox jumps over the
   lazy dog"
if 'e' in pengram:
   print("YES")
if 33 % 2 == 0:
    print("EVEN")
if [1,2,3]:
   print("Non-zero is True")
if Γ1:
   print("Empty is Null")
    print("NULL is False")
```

and more examples

```
ERROR_MSG = "lst is empty"
if len(lst) != 0:
    print(lst[0])
    print(ERROR_MSG)
  lst:
   print(lst[0])
    print(ERROR_MSG)
```

For Loops

Repeat N times
Iterate members of a sequence.

For Loops, C style

```
#include <stdio.h>
int main()
{
   int i = 0;
   for (i = 0; i < 10; i++) {
      printf("%d", i);
   }
   return 0;
}</pre>
```

for value in iterable:

pass

For Loops

```
for i in range(6):
    print("hello!")
nums = [1, 2, 3, 4, 5, 6]
for i in range(len(nums)):
    print(nums[i])
    nums[i] += 1
for e in nums:
    print(e)
```

For Loops Cont'

```
for n in nums:
    print(n)
        print("We found 2!")
x = 0
for n in nums:
    x += n
print(x)
```

For Loops Nested

```
matrix = [[1,2,3], [4,5,6], [7,8,9]]
for row in matrix:
    for e in row:
        print(e, end=' ')
    print()
for i in range(1000):
        for k in range(1000):
            print(i, j, k)
```

While Loops

Repeat while condition(boolean) is satisfied.

while condition: pass

```
while True:
    print("Forever")
while False:
    print("Can I print?")
while True:
    s = input("Please Enter 'hi': ")
    if s == 'hi':
```

Practice

Output: print 99dan from 1 to N. Hint:

Practice with stars!

Input: N Print:

```
**
***
  *
 **
***
```

Hint:

```
Using for loops, create list of even numbers in [0, 10]

lst = []
for n in range(0, 11):
```

```
for n in range(0, 11):
    if n % 2 == 0:
        lst.append(n)
# or
```

for n in range(0, 11, 2):
 lst.append(n)

lst = []

Comprehension

The easy way (and faster!)

```
lst = [n for n in range(0, 11, 2)]
# we can use if as well
lst = [n for n in range(11) if n % 2 == 0]
```

time python3 test1.py

```
for _ in range(1000):
    lst = []
    for n in range(0, 100000):
        if n % 2 == 0:
            lst.append(n)
```

real: 12.744s

```
for _ in range(1000):
    lst = []
    for n in range(0, 100000, 2):
        lst.append(n)
```

real: 5.019s

```
for _ in range(1000):
    lst = [n for n in range(100000) if n%2==0]
```

real: 7.085s

```
for _ in range(1000):
    lst = [n for n in range(0, 100000, 2)]
```

real: 1.356s

Comprehension

```
new\_list = [expression \ \textit{for} \ element \ \textit{in} \ iterable \ (\textit{if} \ condition)]
```

```
new_list = []
for element in iterable:
    if condition:
        new_list.append(expression)
```

Comprehension

```
lst = [n for n in range(10)]
lst == list(range(10)) # True
input_nums = [int(input()) for _ in range(5)]
input_nums = [int(n) for n in input().split()]
lst = [n**2 for n in range(10)]
lst = [[0] * 10 for _ in range(10)]
upper = [c for c in 'AbcD' if c.isupper()]
lst = [print("HELLO") for _ in range(10)]
```

Generators

Lazy version of comprehension [x for x in...] \rightarrow (x for x in...)

```
for _ in range(1000):
    gen = (n for n in range(0, 100000, 2))
```

real: 0.053s

Fast, but has limited usage.

Practice

Mismatched ()s (e.g."(()",")(()") are painful when we are coding. Write a program that prints 'yes' when the ()s match, and 'no' when they do not match.

```
())()
no
(())()
yes
```
